1. GOAL OF THE SERVICE

The service PresenceRegistration is a service for recording the presence of workers at the workplace by an employer and the consultation of such data by internal applications.

2. DOCUMENT MANAGEMENT

2.1 DOCUMENT GOAL

This document provides functional and technical information on calling PresenceRegistration, as provided by the National Social Security Office (NSSO). This information should allow (the IT department of) an organization to integrate and use the service.

In this service specification document, we explain the structure and content aspects of the possible service requests and replies. An example illustrates each of those messages. Also, the list of possible errors is included in this document.

Some technical and legal requirements must be satisfied in order to allow the integration of the services in client applications; this document was written in order to provide you with an overview of requirements which have to be met in order to integrate correctly with the Services offered by National Social Security Office (NSSO).

4. PREREQUISITES

4.1 BUSINESS PREREQUISITES

Service is accessible to any employer registered as user on the Social Security portal with the approval of the Social Security. https://www.socialsecurity.be/site_fr/general/helpcentre/soa/overview.htm

Users who are part of a professional sector submitted to the obligation of presence registration to the National Social Security Office and wanting to integrate their planning tools or other relevant systems with the PresenceRegistration service.

Inspection Services can use the service to consult the presence registrations available in the system.

4.2 TECHNICAL PREREQUISITES

4.2.1 Security

The PresenceRegistration-v1 Soap web service, in order to conform to security enhanced standards will soon cut the support for the security endpoints using Basic256 (Sha-1) algorithm suite for security policy bindings. (ref.: ws-securitypolicy-spec).

Only Basic256Sha256 is and will be supported.

If, in your requests as a client, you currently use:

- X.509 Token Profile (Sha-1),
- SAML Token Profile holder-of-key (Sha-1), or
- SAML Token Profile sender-vouches

you are required to migrate to

- X.509 Token Profile (Sha-256)

by using/referring to the be/socialsecurity/presenceregistration/v1/PresenceRegistration-X509Sha256_v1.wsdl located in the Service Contract Archive in the Classifications section of the portal page*,

or

- SAML Token Profile (holder-of-key) (Sha-256)

by using/referring to the be/socialsecurity/presenceregistration/v1/PresenceRegistration-SAMLHokSha256_v1.wsdl located in the Service Contract Archive in the Classifications section of the portal page*

* portal page: https://www.socialsecurity.be/site_fr/general/helpcentre/soa/presence_registration.htm

5. DESCRIPTION OF THE SERVICE OPERATIONS

The service consists of following operations :

Operations	Description
cancelPresences	A list of presence registrations to cancel. The list contains one or more CancelPresenceRequestType Complex Type with a PresenceRegistrationId and the CancellationReason. Current allowed values of the CancellationReason are HOLIDAY, DISEASE, PLANNING, C32A
getPresenceRegistration	In order to get all the possible details about a certain presence registration one can use this call to retrieve the full history of a certain presence registration identified by its PresenceRegistrationId.

registerPresences	This operation is used to submit one or more presence registrations to the Social Security as required in some worksites. A typical registration requires to provide the who, where and when information. You may make up till 200 of such PresenceRegistrationRequests of the complex type PresenceRegistrationSubmitType in one call to the RegisterPresencesRequest, which will be answered by a RegisterPresencesResponse with each RegisterPresenceResponse either returning a PresenceRegistrationType (=success) or a PresenceRegistrationErrorType (=failed registration).
searchPresences	This operation allows to search one or more presence registrations as required on some worksites. A SearchPresencesRequest contains search criteria (SearchPresenceRegistrationCriteria), together with pagination (PaginationProperties) and sorting possibilities (SortingProperties) to return a SearchPresencesResponse with a list of presence registrations that correspond to the above criteria and properties. The user must indicate a period for the registration : the fields RegistrationPeriodStartDate and RegistrationPeriodEndDate are mandatory. The reply message is given as a SearchPresencesResponseType and contains the original request (SearchPresencesRequest) and either a PresenceRegistrationList or a PresenceRegistrationError. In case it is a PresenceRegistrationList, it contains the result count. The number of presence registrations is limited to 500.
